**Step 3** Place the spring loaded latch onto the gate and ensure the pin is in the centre of the striker plate.

**Step 4** Ensure the pin contacts the edge of the angled section of the striker plate and tack weld the latch in place.

Incorrect latch location

*The pin must not overlap or pass the lip of the striker plate*

Correct latch location

*The pin is in contact with the angled section of the striker plate*

**Step 5** Weld the cam to the latch body in the location indicated by the red arrow. A decent tack weld will suffice.

**Step 6** Test the gate opens and closes freely and the pin doesn't fowl on or inside the striker plate.

**Step 7** Once satisfied that both the plate and latch are in the correct location, fully weld the plate and latch in place.

*Quick Tip - Use a spray lubricant such as WD-40 regularly to ensure the pin moves freely and allows the gate to open and close with ease.*
